SUMMARY

Data Analyst with 3+ years of experience translating complex, multi-source datasets into actionable business insights across telecom, aviation, and FMCG domains. Skilled in Power BI, advanced Excel analytics, and Python-based data cleaning/EDA, with a track record of reducing manual reporting time by 20% and accelerating executive reporting cycles by 40% through automated dashboards and data pipelines.

EDUCATION

Symbiosis Institute of Digital and Telecom Management (SIU), Symbiosis International University
Shaheed Sukhdev College of Business Studies, Delhi University

*MBA, Systems and Finance
B. Tech, Computer Science*

WORK EXPERIENCE

Data Analyst – CPRD Sector & Singapore Airlines; Capgemini; Bengaluru, India

Apr 2022 – Jan 2025

- Consolidated workforce data across service lines for demand-supply mapping, attrition tracking, and headcount forecasting, partnering with delivery managers and international clients on data-backed planning.
- Streamlined reporting by integrating Salesforce CRM, JIRA, and staffing data into centralized Power BI dashboards, accelerating executive reporting cycles by 40% and cutting manual reporting time by 20%.
- Developed interactive Power BI dashboards using Power Query and advanced DAX, enhancing data precision by 25% and enabling real-time insights into PCR and critical resource metrics.
- Improved timesheet governance through MIS reporting and Excel analytics, reducing timesheet discrepancies by 15% via proactive issue resolution.
- Translated stakeholder requirements into detailed user stories and process maps aligned with Salesforce CRM data structures, contributing to a 30% acceleration of the QA data validation cycle during SIT and UAT.
- Built and maintained visual workflow diagrams and MIS reports to track project velocity and issue-resolution data using JIRA/Zephyr, supporting transparent, data-driven delivery tracking.
- Conducted research on market trends and competitor data to surface insights informing business strategy and decision-making.

Technical Consultant – MS Exchange Online; Wipro Technologies; New Delhi, India

Jun 2018 – Nov 2018

- Analyzed client requirements and feedback data within the Microsoft 365/O365 ecosystem to refine technical migration proposals and improve business alignment.
- Supported migration planning from legacy systems to Microsoft 365 with structured data-driven assessments to ensure smooth transitions.

PROJECTS

End-to-End Exploratory Data Analysis – Survival on the Titanic

[\(GitHub\)](#)

Business Problem: Uncover which passenger demographics and travel attributes most strongly influenced survival outcomes aboard the Titanic, in order to model generalizable risk-assessment criteria that could be applied to insurance underwriting, safety-planning, and emergency-response prioritization use cases. The dataset arrived with substantial missing values and inconsistent categorical encodings that needed to be resolved before any reliable pattern analysis could begin.

Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn, ydata-profiling, Jupyter Notebook.

Technical Solution: Imputed missing Age and Cabin values using group-wise medians, engineered family-size, title, and deck-level features, and generated an automated interactive profiling report surfacing correlations, distributions, and outliers across all variables.

Business Impact: Reduced data validation and preprocessing time for downstream model readiness by 40%, while clearly validating demographic survival patterns for stakeholder reporting. The resulting feature set and profiling report became a reusable template for future passenger-safety and risk-segmentation analyses, cutting onboarding time for new analysts joining similar projects.

Data Preprocessing & Feature Engineering – Airbnb Listing Dataset

[\(GitHub\)](#)

Business Problem: Clean a raw, messy Airbnb listings dataset containing missing values, inconsistent formatting, and duplicate records into a reliable, analysis-ready database for pricing and market research teams. The dataset spanned multiple host countries with varying data-entry conventions, making naive aggregation unreliable and masking true pricing and occupancy trends across regions.

Tech Stack: Python, Pandas, Google Colab, Jupyter Notebook.

Technical Solution: Performed strategic missing-value imputation based on listing-type medians, removed duplicate listings, standardized inconsistent categorical entries, and engineered host-country, guest-count, and check-in-duration features.

Business Impact: Established a clean, reliable dataset that serves as a dependable foundation for downstream pricing models and host-performance analysis, cutting manual data-cleaning effort significantly. The standardized schema also enabled faster cross-country comparisons, giving market research teams a consistent base to benchmark host performance and pricing strategy against.

Macroscopic Data Visualization – GDP Trends Plotly Analysis

[\(GitHub\)](#)

Business Problem: Help strategy and market-entry teams compare macroeconomic performance and year-over-year growth trends across 250+ nations to identify high-potential markets for international expansion. Raw GDP data from multiple sources needed reconciliation across inconsistent reporting periods and currency conventions before any meaningful cross-country comparison was possible.

Tech Stack: Python, Pandas, Plotly Express, Jupyter Notebook, HTML, Google Drive API.

Technical Solution: Processed multi-year global GDP datasets, computed annualized growth-rate algorithms per country, and built an automated pipeline generating interactive Plotly visualizations and scalable HTML reports for every region.

Business Impact: Enabled analysts to dynamically explore country-level performance trends, reducing manual analysis time by 90% and supporting faster, evidence-based expansion assessments. The automated HTML report pipeline meant new countries or updated data could be incorporated without rebuilding visualizations from scratch, saving substantial recurring analyst effort.

CORE SKILLS

Data Analysis & Visualization: Power BI, Excel (VBA, MIS Reporting), Python (Pandas, NumPy, Matplotlib, Seaborn)

Data & Query Tools: SQL, MySQL Workbench, ETL Processes, Data Modeling, Data Mapping, ydata-profiling

Reporting & Governance: Stakeholder Reporting, KPI Monitoring, Workforce/Resource Analytics, Salesforce CRM Data

Project & Process Tools: JIRA, Zephyr, Agile/Scrum, Azure (AZ-900), Statistical Modeling through EDA & ETL

CERTIFICATIONS

- AWS Academy Cloud Foundation – AWS Academy (October 2022)
- Power BI Fundamentals – Microsoft Learn (January 2023)
- Agile Project Management – University of Minnesota (August 2024)
- AZ-900 Azure Fundamentals – Udemy (November 2024)
